

VIVOTEK Megapixel Network Cameras Now Supported by GVD

VIVOTEK is pleased to announce that GVD's CMS workstation now supports VIVOTEK's Megapixel network cameras. Megapixel network cameras have emerged as the main trend for IP surveillance because of their capability to provide wide coverage and exceptional detail. The integration of GVD software and VIVOTEK's full range of 2-megapixel network cameras meets market expectations to fulfill high-end, demanding surveillance applications.

The GVD E Series Control Workstation is the first HD surveillance system designed for multiple megapixel cameras for enterprise security. This workstation maximizes bandwidth efficiency to support hundreds of network cameras with amazing video response time, and allows operators to handle security incidences efficiently with minimal training.

"We are pleased to have GVD's CMS workstation as a Megapixel solution partner. We believe this integration enables us to better serve our customer needs and yield greater benefits to our respective businesses," said Owen Chen, Chairman of VIVOTEK.

"The integration of VIVOTEK's products into our video surveillance and recording solutions expands our compatibility list with leading IP Camera manufacturers. We are pleased to have VIVOTEK as our strategic partner, and believe the cooperation creates an innovative and solid IP surveillance solution." said Steve Chu, CEO of GVD.
